Nebraska Wesleyan University

FORSC 5560 Photo as Documentation

Catalog

2014-2015

Course Description

This class is an introduction to the basic theory of digital photography and imaging as documentation. Students will learn how to use and control a digital SLR camera, flash, studio lights and other techniques to produce images. The computer and imaging software will be used to generate images for print and electronic display. Subject matter, form and content will also be emphasized in the production of images. Graduate level students will be held to a higher standard and will complete a research project in addition to the regular classroom assignments, quizzes and projects.
