Biology

A study of the systems, mechanisms, and methods of molecular genetics with a particular emphasis on the analysis of the genetic material--mutagensis, replication, regulation, transcription, and translation--and its protein products and their biological function. Recombinant DNA/genetic engineering and other modern technologies will be discussed. Prerequisite(s): BIO-1400, BIO 2200 Genetics and Cell Biology, CHEM 1110 Chemical Principles I, and CHEM 2100 Organic Chemistry I.
