

Course:

FORSC 509 Cold Case Homicide Investigation

2 hours

Majors (Grad)

Master of Forensic Science

Master of Science in Forensic Science

Departments/Programs:

Forensic Science

In this course, the participants will develop a summary of salient facts in a case investigation reconstruction. The summary will include a timeline of the crime event and subsequent investigation, an index of physical evidence with results of forensic analyses citing potential for additional testing due to new technology, a listing of witnesses, suspects and persons of interest with suggestions for further interviews and new investigative leads.

Prerequisite(s): Admittance to the Forensic Science graduation program.
