Biochemistry and Molecular Biology (B.S.)

Chemistry (B.A.)

Chemistry (B.S.)

Minors

Chemistry

The Bachelor of Arts degree is for those who want a core of chemistry courses with a broader background in the liberal arts. The Bachelor of Science degree is for those who wish to emphasize their study of chemistry.

Students interested in chemical engineering can participate in the [Engineering Dual-Degree Program](#) described in the Department of Physics and Astronomy section of this catalog.

A program of study emphasizing a strong background in chemistry is available for students planning a future in medicine.

The Department of Chemistry is on the approved list of the American Chemical Society (ACS). Approval is received after an examination of curriculum, laboratory facilities, library, and staff of the department by the Committee on Professional Training of the ACS.

Students who wish to be certified as having met the minimum requirements of the American Chemical Society for professional training must complete two semesters of advanced work based on concepts and techniques developed in the "core curriculum" (those courses required for the Bachelor of Science degree in Chemistry, excluding Chemistry 293 and 295). Chemistry 252 and certain projects in Chemistry 295 will satisfy this requirement as will advanced courses in mathematics and physics. Students wishing to be certified must work closely with the department chair in developing their program of study.

Courses

CHEM 010 Chemistry and the Human Environment (4 hours)

A course designed to acquaint non-science majors with some fundamental concepts of chemistry. The course emphasizes the role of chemistry in understanding the interaction of modern society with the environment. Credit will not be given for both CHEM-051 and CHEM-010.

Three lectures per week.

One 3-hour lab per week.

CHEM 041 Forensic Chemistry (4 hours)

A course designed to acquaint students with fundamental concepts of chemistry. The course emphasizes the role of chemistry in the science of solving crimes. Topics include forensic laboratory ethics, evidence collection and preservation, chemical evidence, drug chemistry, arson investigation, chemistry of explosions, poisons, and DNA analysis.

Three lectures per week.

One 3-hour lab per week.

CHEM 051 Chemical Principles (3 hours)

A study of fundamental principles of chemistry including structures of atoms and molecules, periodicity, stoichiometry, reactions, solutions, gases, and thermochemistry.

Three classes per week.

CHEM 051L Chemical Principles Laboratory (1 hours)

Laboratory supporting Chemical Principles.

One 3-hour lab per week.

Pre or corequisite: CHEM-051.

CHEM 090 Selected Topic (1-4 hours)

A course designed to treat subject matter not covered in other departmental courses. The title, content, and credit will be determined by current mutual interests of students and faculty.

CHEM 100 Introduction to Research (1 hours)

An introduction to experimental research.

One 3-hour lab per week.

Prerequisite(s): Permission of the instructor.

(Normally offered each spring semester.)

CHEM 120 Organic Chemistry I (3 hours)

A survey of the structure and reactions of carbon-containing molecules, with emphasis on compounds of biological interest.

Three lectures per week.

Prerequisite(s): CHEM-051 and CHEM-051L with a grade of "C" or better.

CHEM 120L Organic Chemistry I Laboratory (1 hours)

A laboratory supporting CHEM-120.

One 3-hour lab per week.

One 1-hour pre-lab lecture per week.

Corequisite: CHEM-120.

CHEM 121 Organic Chemistry II: Synthesis and Mechanisms (3 hours)

A continuation of CHEM-120. A study of reactions of importance in the synthesis and biosynthesis of carbon compounds, including reaction mechanisms and spectroscopic methods for the determination of structures.

Three lectures per week.

Prerequisite(s): CHEM-120 and CHEM-120L with grades of "C-" or better.

CHEM 121L Organic Chemistry II Laboratory (1 hours)

A laboratory supporting CHEM-121.

One 3- to 4-hour lab per week.

One 1-hour pre-lab lecture per week.

Corequisite(s): CHEM-121.

CHEM 122 Analytical and Inorganic Chemistry (3 hours)

An introduction to certain aspects of analytical inorganic chemistry. Analytical topics include the general subject of chemical equilibrium in solution, and the classical methods of chemical analysis. Inorganic topics include descriptive inorganic chemistry, coordination chemistry, and the solid state.

Prerequisite(s): CHEM-051 and CHEM-051L with grades of "C-" or better.

CHEM 122L Analytical and Inorganic Chemistry Laboratory (1 hours)

A laboratory designed to support CHEM-122. Laboratory work is divided between quantitative chemical analysis and inorganic reactions.

One 3- to 4-hour lab per week.

CHEM 130 Organic Chemistry III: Intermediate Organic Chemistry (2 hours)

Reactions, mechanisms, and the application of the infrared, ^1H NMR, ^{13}C NMR, UV/Visible, and mass spectrometry to molecular structure determination are presented. Emphasis is placed on the interpretation of spectra to determine structures of organic molecules. The laboratory involves synthesis, the use of the spectrometer, and problem solving with discussion groups.

One lecture and one 3-hour lab per week.

Prerequisite(s): CHEM-121.

CHEM 190 Selected Topics (1-5 hours)

A course designed to treat subject matter not covered in other departmental courses or to provide advanced study of subject matter introduced in other courses. The title, content, and credit will be determined by current mutual interests of students and faculty.

Prerequisite(s): Permission of department chair. Other prerequisites to be determined.

CHEM 195 Independent Study (1-12 hours)

Individual laboratory project in chemistry of biochemistry. Independent Study may not duplicate courses described in the catalog.

Prerequisite(s): Permission of the department chair.

CHEM 196 Special Projects (1-3 hours)

Supervised work on an approved project involving subject matter not included in any of the standard courses. Projects are normally developed individually but may be arranged for organized groups. Registration should designate the area of work.

Prerequisite(s): Permission of department chair.

CHEM 221 Physical Chemistry I, Thermodynamics and Kinetics (3 hours)

An introduction to physical chemistry consisting of fundamentals of chemical thermodynamics, chemical and physical equilibrium, and chemical kinetics presented using a calculus-based mathematical treatment.

Three lectures per week.

Prerequisite(s): CHEM-122 and MATH-105.

CHEM 221L Physical Chemistry Laboratory (1 hours)

Laboratory exercises in the measurement of physical and chemical properties of chemical systems. This course is designed to accompany CHEM-221.

One 3-hour lab per week.

Prerequisite(s): CHEM-122 and CHEM-122L.

Corequisite: CHEM-221.

(Normally offered each fall semester.)

CHEM 222 Physical Chemistry II, Quantum Chemistry and Spectroscopy (3 hours)

An introduction to quantum chemistry and an exploration of the theoretical concepts of selected spectroscopic techniques presented using a calculus-based, mathematical treatment.

Three lectures per week.

Prerequisite(s): CHEM-121 and MATH-106.

CHEM 222L Physical Chemistry Laboratory (1 hours)

Continuation of CHEM-221L. The course is designed to accompany CHEM-222.

One 3-hour lab per week.

Prerequisite(s): CHEM-121 and CHEM-121L.

Corequisite: CHEM-222.

(Normally offered each spring semester.)

CHEM 231 Inorganic Chemistry (4 hours)

A survey of inorganic systems including a study of periodic trends, bonding and structure, coordination compounds, nonaqueous solvents and properties of some elements. The laboratory work consists of the preparation of assigned inorganic compounds that provide experience in some synthetic techniques.

Three lectures per week.

One three-to-four-hour lab per week.

Prerequisite(s): CHEM-221.

(Normally offered each spring semester.)

CHEM 242 Instrumental Methods of Analysis (4 hours)

The theory and applications of modern instrumental methods of chemical analysis.

Two lectures per week.

Two 3-hour labs per week.

Prerequisite(s): CHEM-121.

Recommended: PHYS-121.

(Normally offered each spring semester.)

CHEM 252 Advanced Organic Chemistry (4 hours)

Topics presented in this course are reaction mechanisms, modern synthetic methodology, and the application of molecular modelling computational methods to organic chemistry. The laboratory work includes syntheses illustrative of special techniques, experiments concerned with the determination of reaction mechanisms, use of molecular modelling and molecular orbital computational programs, and research simulation.

Two lectures and two 3-hour labs per week.

Prerequisite(s): CHEM-221. MATH-106 strongly recommended.

CHEM 255 Biochemistry (3 hours)

A comprehensive introduction to the field of biochemistry that will stress the role of molecular structure and reactivity in determining biological function. The course will emphasize biochemical problem solving by the application of basic chemical principles.

Three lectures per week.

Prerequisite(s): CHEM-122 with a grade of "C" or better. A basic biology background is strongly recommended.

(Normally offered each fall semester.)

CHEM 256 Advanced Biochemistry (3 hours)

An advanced study of selected areas of biochemistry that will include enzyme kinetics, enzyme reaction mechanisms, DNA-protein interactions, rational drug design, metal ions in biology, and other topics. In addition, the use of advanced chemical and biochemical principles in biotechnology will be explored.

Three lectures per week.

Prerequisite(s): CHEM-255 or BIO-281.

CHEM 258 Biochemical Methods (1 hours)

An introduction to biochemical methods used to isolate and characterize biomolecules from natural sources. A variety of analytical and physical methods, including UV-visible and NMR spectroscopies, will be used to determine structural features and to measure functional properties of the isolated biomolecules.

One 3-hour lab per week.

Corequisite(s): CHEM-255 or BIO-281.

(Normally offered each fall semester.)

CHEM 290 Selected Topics (1-5 hours)

A course designed to treat subject matter not covered in other departmental courses or to provide advanced study of subject matter not introduced in other courses. The title, content, and credit will be determined by current mutual interests of students and faculty.

Prerequisite(s): To be determined.

CHEM 293 Chemistry Seminar (1 hours)

Reading, study, and discussion of one or more major topics in chemistry with significant implications for the broader society. Students will search the chemical literature, and will make both oral and written presentations.

One lecture per week.

Prerequisite(s): Upper-division standing and a major declared in the natural sciences division or permission of the instructor.

(Normally offered each fall semester.)

CHEM 295 Independent Study (1-12 hours)

Individual laboratory research project for qualified chemistry majors. A formal project report is required. Independent study may not duplicate courses described in the catalog.

Prerequisite(s): Approval of the department chair.

CHEM 296 Special Projects (1-15 hours)

Supervised work at the senior level on an appropriate project involving subject matter not included in any of the standard courses. Registration should designate the area of work. A formal project report is required.

Prerequisite(s): Approval of the Department Chair.
