Nebraska Wesleyan University

CMPSC 030 Introduction to Computational Problem Solving

Catalog

2012-2013

Course Description

An introduction to computational problem-solving using a programming language. Students learn the syntax and semantics of a language and apply these to the solution of mathematical problems. The course is recommended for all who wish to explore computer science. Students review mathematical concepts and use them as the basis of an algorithmic solution during a hands-on lab.

Prerequisite(s): Appropriate placement score.

Course Hours

3 hours
