Nebraska Wesleyan University

CMPSC 040 Program Design

Catalog

2012-2013

Course Description

A disciplined approach to the development of programs to solve problems on a computer. Topics include data types, control structures, abstraction, and software development. A lab component introduces a high-level programming language and software tools.

Corequisite(s): CMPSC 030 Introduction to Computational Problem Solving or permission of the instructor.

(Normally offered each semester.)
