

**Course:**

**CHEM 3410L Biochemical Methods**

1 hour

**Majors, Minors & Degrees:**

**Majors**

Biochemistry and Molecular Biology (B.S.)

**Departments/Programs:**

Chemistry

An introduction to biochemical methods used to isolate and characterize biomolecules from natural sources. A variety of analytical and physical methods, including UV/visible and NMR spectroscopies, will be used to determine structural features and to measure functional properties of the isolated biomolecules.

One three-hour lab per week.

*Corequisite(s): CHEM 3410 Biochemistry or BIO 3410 Biochemistry.*

(Normally offered each fall semester.)
