Nebraska Wesleyan University

SOC 2530 Population and Environment

Catalog

2017-2018

Course Description

This course examines the demographic and social dynamics of population size, composition, and distribution. It addresses the relationships among population, human health, development and the environment. Strong cross-cultural emphasis. A major focus is the development of a semester research paper contrasting the status of the Millennium and Sustainable Development Goals, environmental status, and health in a more- and less- developed country.
