Course:

SOC 3530 Environment, Food, and You

4 hours

Majors, Minors & Degrees:

Majors
Sociology-Anthropology (B.A., B.S.)

Minors
Environmental Studies

Departments/Programs:

Sociology and Anthropology

This course identifies and explores issues involved in the interaction between humans and the environment. Students are introduced to social impact assessment as a means for identifying the ways resource exploitation leads to both the development and decline of communities. Food production is used to illustrate these impacts because it plays a significant role in community organization, human survival, and environmental resilience.
Prerequisite(s): SOC 1110 Introduction to Sociology or SOC 2530 Population and Environment.
(Normally offered alternate years.)
