

Course:

ATTR 5520X Applied Research & Statistics in Athletic Training I

2 hours

Departments/Programs:

Health and Human Performance (Undergraduate)

Designed for graduate students to develop an understanding of the research process and the rationales for basic behavioral statistics in the field of athletic training. In this course, students will continue to learn about the research process, including evidence-based practice. This class will focus on developing skills to complete a systematic review. Students will present their work at the NWU Student Symposium.
