Project Management

Certificates

Project Management

Departments/Programs:

Business, Accounting and Economics (Undergraduate)

When change outpaces planning and requirements keep shifting, traditional project management falls short. That's where Agile comes in—designed to thrive in uncertainty and deliver value in fast-paced environments. Here, adaptability beats predictability, and customer satisfaction takes priority over rigid plans. In this course, you'll learn to pivot with purpose, keep your team aligned, and impress stakeholders, even when the ground is constantly shifting.
